

Working with the Filesystem

Michael Van Sickle

AUTHOR

@vansimke

Introduction

Querying the Filesystem

Reading Directories

Manipulating Directories

Basic Queries

```
$dir = getcwd();           // $dir = current working directory
```

```
$space = disk_free_space($dir); // available bytes in directory's current volume
```

```
$size = disk_total_space($dir); // total size in bytes of directory's current  
                                   // volume
```

File-Related Queries

`$result = is_file($somePath);` `// TRUE if $somePath points to a file`

`$result = is_dir($somePath);` `// TRUE if $somePath points to a directory`

`$result = file_exists($somePath);` `// TRUE if $somePath points to file or dir.`

Reading Directories

Reading Directories

Reading Directories

Manipulating Directories

Navigate

`chdir()`

Create

`mkdir()`

Delete

`rmdir()`
